1. Weekly Overview

This week, I continued working through the MIT Python course and completed approximately two and a half lectures. I also completed the Tabind project and uploaded it to GitHub. In addition, I started working on the Provider lookup project.

2. Python Learning Progress

- Completed MIT 60002 Lecture 2, 3, 4, 5.
- These lectures cover how to use computational models to solve problems, including optimization methods such as greedy algorithms and brute-force search, as well as graphs and graph-search algorithms.
- They also introduce probability, stochastic processes, simulations, and random walks, showing how Python can be used to model and analyze problems involving uncertainty.

3. Project Progress

- Completed the Tabind Problem project and uploaded it to GitHub.
- Started working on the Provider lookup project. Uploaded the ER Diagram.

4. Next Steps

- Continue with the next MIT Python lectures and complete the related exercises.
- Finish the Provider lookup Project.
- Begin working on the next Python project after completing the current one.
