1. Weekly Overview

This week, I updated the Medicaid dataset, generated a document report, and researched potential explanations for the trends observed across four states: New York, Illinois, Pennsylvania, and Washington. I also consolidated the findings into a Word document and generated HTML content for presentation.

2. Project Progress

- Generated a report summarizing the Medicaid data and related findings. Investigated potential factors contributing to the observed patterns in New York, Illinois, Pennsylvania, and Washington
- Organized the analysis and research findings into a Word document and generated corresponding HTML content..

3. Next Steps

- Review the current projects and selected proposals from mmis.ai to better understand their ongoing work and priorities.
