1. Weekly Overview

This week, I continued working through the MIT Python course and completed approximately two and a half lectures. I also completed the Provider lookup project and uploaded it to GitHub. In addition, I started working on the Provider Exclusion list project.

2. Python Learning Progress

- Completed MIT 60002 Lecture 6, 7, 8.
- These lectures cover Monte Carlo simulation, using repeated random experiments to estimate unknown quantities and understand how sample size and variance affect confidence in an estimate.
- They also cover normal distributions, confidence intervals, sampling, the Central Limit Theorem, and standard error, explaining how we can use samples to estimate a population and quantify the uncertainty of those estimates.

3. Project Progress

- Completed the Provider lookup Problem project and uploaded it to GitHub. But I still need to add the Django feature. <https://github.com/yjzhu131-tech/Provider-Lookup-Project>
- Started working on the Provider exclusion list project.

4. Next Steps

- Continue with the next MIT Python lectures and complete the related exercises.
- Finish the Provider lookup Project.
- Begin working on the next Python project after completing the current one.
