1. Weekly Overview

This week, I continued working through the MIT Python course and completed approximately two and a half lectures. I also completed the Provider lookup project and uploaded it to GitHub. In addition, I started working on the Provider Exclusion list project.

2. Python Learning Progress

- Completed MIT 60002 Lecture 8, 9, 10.
- These lectures cover how to draw reliable conclusions from data, starting with sampling, standard error, and confidence intervals, and then moving to fitting models to experimental data using regression and least squares.
- They also explain how to evaluate and choose models, including comparing polynomial fits and avoiding overly complex models that may not generalize well to new data.

3. Project Progress

- Completed the Provider lookup Problem project and uploaded it to GitHub.
<https://github.com/yjzhu131-tech/Provider-Lookup-Project>
- Working on the Provider exclusion list project.

4. Next Steps

- Continue with the next MIT Python lectures and complete the related exercises.
- Finish the Provider exclusion list Project.
- Begin working on the next Python project after completing the current one.
