1. Weekly Overview

This week, I developed forecasts for Medicaid enrollment and expenditure data. For enrollment, I applied Prophet and a policy changepoint model; for expenditure, I used Holt's damped trend method. I also incorporated CHIP data and completed state-level forecasting work for New York, Illinois, Pennsylvania, and Washington.

2. Project Progress

- Medicaid Enrollment Forecasting: Applied Prophet and a policy changepoint model to forecast enrollment trends, incorporating CHIP data into the analysis..
- Medicaid Expenditure Forecasting: Used Holt's damped trend method to project expenditure trends. Completed state-level analyses for New York, Illinois, Pennsylvania, and Washington.

3. Next Steps

- Extend the enrollment and expenditure forecasts to the national level. Add written explanations of the forecasting methods, key trends, and results to support interpretation of the analysis.
