1. Weekly Overview

This week, I continued working through the MIT Python course and completed approximately two and a half lectures. I also completed the Provider lookup project and uploaded it to GitHub. In addition, I started working on the Provider Exclusion list project.

2. Python Learning Progress

- Completed MIT 60002 Lecture 11, 12, 13.
- These lectures introduce the fundamentals of machine learning, covering the distinction between supervised and unsupervised learning and how distance between data points can be used to identify patterns and make predictions.
- They then focus on two major applications: clustering using hierarchical clustering and K-means, and classification using methods such as K-nearest neighbors and logistic regression, along with techniques for evaluating model performance.

3. Project Progress

- Working on the Provider exclusion list project.
- Finished the database establishment.

4. Next Steps

- Continue with the next MIT Python lectures and complete the related exercises.
- Finish the Provider exclusion list Project.
- Begin working on the next Python project after completing the current one.
