1. Weekly Overview

This week, I completed four MIT Python covering object-oriented programming, computational complexity, Big O notation, and binary search. I also completed the FizzBuzz small project and uploaded to GitHub and started working on the Gallon Bucket Problem.

2. Python Learning Progress

- Completed MIT Python Lectures 8-11.
- Learned object-oriented programming concepts, including classes, inheritance, class variables, and operator overloading.
- Studied computational complexity, Big O notation, common complexity classes, and binary search.

3. Project Progress

- Completed the FizzBuzz Project and uploaded it to GitHub.
- Started working on the Gallon Bucket Problem project.

4. Next Steps

- Continue with the next MIT Python lectures and complete the related exercises.
- Finish the Gallon Bucket Problem project.
- Begin the next Python project and continue updating GitHub with project documentation.
